AMUSEMENT PARK

Theme parks are loved the world over, with operators constantly striving to maintain safety standards and optimize efficiencies. We have worked with one of the biggest Amusement and theme park of India. Our technical expertise in automation has added more fun element in simulated flying experience of "I for India" ride – Witness the magnificence of India in a unique flying experience.

The safety element plays a crucial role to have accident free rides. In order to upgrade and improve this ride's system, AC drives and five 75kW Unidrive SPs were fitted as part of the renewal of the control panels. Signals from encoders fitted to each of the motors give feedback to the drives and then re-transmit to programmable logic controllers that control the safety of the entire system.
