

## CONDENSATE POT

Condensate chambers, also known as seal pots and condensate drip pots, are welded pressure vessels that allow instruments and valves to be attached in line with routed tubing to allow for line sampling, elimination of fluid, and other processes. They are used to protect sensitive metering systems and devices by trapping and holding condensate and foreign material that may accumulate in gaseous service lines.

## SPECIFICATIONS :

Number of tappings	2, 3, 4, 5, 6, 9
Thread	½ NPT (female) ½ SW ½ BW Others on request
Nominal size	2", 3", 4", 6"
Pipe schedule	Schedule 40, 80, 160, XXS Pipe schedules per ANSI B36-10
Material	A 106 B A 333 grade 6 A 335 grade P11 A 335 grade P22 A 335 grade P91 SS 304 / 304L SS 316 / 316L Others on request
